

LACK OF STANDARDISATION IS CREATING COMPLEXITY AND COST

Inconsistent systems increase downtime, risk and engineering inefficiency.

THE IMPACT

Increased downtime risk

Slower fault finding

Higher maintenance costs

Greater engineering complexity

Reduced scalability

Dependency on key individuals

THE ROOT CAUSES

Inconsistent PLC code structures

Different panel designs across sites

Mixed component and hardware standards

Varying documentation practices

Lack of unified engineering standards

THE SOLUTION

Standardise PLC architectures and coding

Implement consistent panel design standards

Align SCADA, alarms and naming conventions

Improve documentation and revision control

Apply repeatable engineering processes

THE RESULTS

FASTER FAULT FINDING

Consistent systems are easier to understand and troubleshoot.

REDUCED DOWNTIME

Quicker resolution means less downtime and disruption.

LOWER MAINTENANCE COSTS

Less time spent working around inconsistencies reduces costs.

EASIER UPGRADES

Standard systems are simpler to expand and integrate.

IMPROVED ENGINEERING EFFICIENCY

Engineers work smarter with consistent tools and standards.

GREATER CONSISTENCY

Predictable systems deliver reliable, repeatable performance.

**STANDARDISE YOUR SYSTEMS
AND REDUCE COMPLEXITY**
